

Scan Report

March 11, 2020

Summary

This document reports on the results of an automatic security scan. All dates are displayed using the timezone “Coordinated Universal Time”, which is abbreviated “UTC”. The task was “a123a1579718760_{task}”.*The scan started at 04 : 24 2020 UTC. The report first summarises the results found. Then, for each host, the report describes every issue found. Please*

1 Result Overview

Host	High	Medium	Low	Log	False Positive
10.10.60.55 csirtadmin-virtualbox	0	0	0	20	0
127.0.0.1 localhost	1	0	0	39	0
Total: 2	1	0	0	59	0

Vendor security updates are not trusted.

Overrides are off. Even when a result has an override, this report uses the actual threat of the result.

Information on overrides is included in the report.

Notes are included in the report.

This report might not show details of all issues that were found.

Issues with the threat level “High” are not shown.

Issues with the threat level “Medium” are not shown.

Issues with the threat level “Low” are not shown.

Issues with the threat level “Log” are not shown.

Issues with the threat level “Debug” are not shown.

Issues with the threat level “False Positive” are not shown.

Only results with a minimum QoD of 70 are shown.

This report contains all 60 results selected by the filtering described above. Before filtering there were 60 results.

2.1.5 Log 8080/tcp

Log (CVSS: 0.0) NVT: CGI Scanning Consolidation
<p>Summary</p> <p>The script consolidates various information for CGI scanning.</p> <p>This information is based on the following scripts / settings:</p> <ul style="list-style-type: none"> - HTTP-Version Detection (OID: 1.3.6.1.4.1.25623.1.0.100034) - No 404 check (OID: 1.3.6.1.4.1.25623.1.0.10386) - Web mirroring / webmirror.nasl (OID: 1.3.6.1.4.1.25623.1.0.10662) - Directory Scanner / DDI_Directory_Scanner.nasl (OID: 1.3.6.1.4.1.25623.1.0.11032) - The configured 'cgi_path' within the 'Scanner Preferences' of the scan config in use - The configured 'Enable CGI scanning', 'Enable generic web application scanning' and 'Add historic /scripts and /cgi-bin to directories for CGI scanning' within the 'Global variable settings' of the scan config in use <p>If you think any of this information is wrong please report it to the referenced community portal.</p>
... continues on next page ...

...continued from previous page...

Vulnerability Detection Result

The Hostname/IP "csirtadmin-virtualbox" was used to access the remote host. Generic web application scanning is disabled for this host via the "Enable generic web application scanning" option within the "Global variable settings" of the scan config in use.

Requests to this service are done via HTTP/1.1.

This service seems to be NOT able to host PHP scripts.

This service seems to be NOT able to host ASP scripts.

The User-Agent "Mozilla/5.0 [en] (X11; U; OpenVAS-VT 9.0.3)" was used to access the remote host.

Historic /scripts and /cgi-bin are not added to the directories used for CGI scanning. You can enable this again with the "Add historic /scripts and /cgi-bin to directories for CGI scanning" option within the "Global variable settings" of the scan config in use.

The following directories were used for CGI scanning:

http://csirtadmin-virtualbox:8080/

While this is not, in and of itself, a bug, you should manually inspect these directories to ensure that they are in compliance with company security standards

Log Method

TLS_RSA_WITH_AES_256_GCM_SHA384
```

Log Method

Details: SSL/TLS: Report Non Weak Cipher Suites

OID:1.3.6.1.4.1.25623.1.0.103441

Version used: \$Revision: 4736 \$

Log (CVSS: 0.0)

NVT: SSL/TLS: Report Supported Cipher Suites

Summary

This routine reports all SSL/TLS cipher suites accepted by a service.

As the NVT 'SSL/TLS: Check Supported Cipher Suites' (OID: 1.3.6.1.4.1.25623.1.0.900234) might run into a timeout the actual reporting of all accepted cipher suites takes place in this NVT instead. The script preference 'Report timeout' allows you to configure if such an timeout is reported.

Vulnerability Detection Result

No 'Strong' cipher suites accepted by this service via the TLSv1.2 protocol.

'Medium' cipher suites accepted by this service via the TLSv1.2 protocol:

```
TLS_RSA_WITH_3DES_EDE_CBC_SHA
TLS_RSA_WITH_AES_128_CBC_SHA
TLS_RSA_WITH_AES_128_CBC_SHA256
TLS_RSA_WITH_AES_128_GCM_SHA256
TLS_RSA_WITH_AES_256_CBC_SHA
TLS_RSA_WITH_AES_256_CBC_SHA256
TLS_RSA_WITH_AES_256_GCM_SHA384
```

No 'Weak' cipher suites accepted by this service via the TLSv1.2 protocol.

No 'Null' cipher suites accepted by this service via the TLSv1.2 protocol.

No 'Anonymous' cipher suites accepted by this service via the TLSv1.2 protocol.

Log Method

NVT: Unknown OS and Service Banner Reporting

Summary

This NVT consolidates and reports the information collected by the following NVTs:

- Collect banner of unknown services (OID: 1.3.6.1.4.1.25623.1.0.11154)
- Service Detection (unknown) with nmap (OID: 1.3.6.1.4.1.25623.1.0.66286)
- Service Detection (wrapped) with nmap (OID: 1.3.6.1.4.1.25623.1.0.108525)
- OS Detection Consolidation and Reporting (OID: 1.3.6.1.4.1.25623.1.0.105937)

If you know any of the information reported here, please send the full output to the referenced community portal.

Vulnerability Detection Result

Nmap service detection (unknown) result for this port: ssl|realserver

This is a guess. A confident identification of the service was not possible.

Hint: If you're running a recent nmap version try to run nmap with the following

↪ command: 'nmap -sV -Pn -p 7070 10.10.60.55' and submit a possible collected fingerprint to the nmap database.

Log (CVSS: 0.0)

NVT: Traceroute

Summary

A traceroute from the scanning server to the target system was conducted. This traceroute is provided primarily for informational value only. In the vast majority of cases, it does not represent a vulnerability. However, if the displayed traceroute contains any private addresses that should not have been publicly visible, then you have an issue you need to correct.

Vulnerability Detection Result

Here is the route from 127.0.0.1 to 127.0.0.1:

127.0.0.1

Solution

Block unwanted packets from escaping your network.

Log Method

Details: Traceroute

Log (CVSS: 0.0)

NVT: CGI Scanning Consolidation

Summary

The script consolidates various information for CGI scanning.

This information is based on the following scripts / settings:

- HTTP-Version Detection (OID: 1.3.6.1.4.1.25623.1.0.100034)
- No 404 check (OID: 1.3.6.1.4.1.25623.1.0.10386)
- Web mirroring / webmirror.nasl (OID: 1.3.6.1.4.1.25623.1.0.10662)
- Directory Scanner / DDI_Directory_Scanner.nasl (OID: 1.3.6.1.4.1.25623.1.0.11032)
- The configured 'cgi_path' within the 'Scanner Preferences' of the scan config in use
- The configured 'Enable CGI scanning', 'Enable generic web application scanning' and 'Add historic /scripts and /cgi-bin to directories for CGI scanning' within the 'Global variable settings' of the scan config in use

If you think any of this information is wrong please report it to the referenced community portal.

... continues on next page ...

...continued from previous page ...

Vulnerability Detection Result

The Hostname/IP "localhost" was used to access the remote host.

Generic web application scanning is disabled for this host via the "Enable generic web application scanning" option within the "Global variable settings" of the scan config in use.

Requests to this service are done via HTTP/1.1.

This service seems to be able to host PHP scripts.

This service seems to be able to host ASP scripts.

The User-Agent "Mozilla/5.0 [en] (X11; U; OpenVAS-VT 9.0.3)" was used to access the remote host.

Historic /scripts and /cgi-bin are not added to the directories used for CGI scanning. You can enable this again with the "Add historic /scripts and /cgi-bin to directories for CGI scanning" option within the "Global variable settings" of the scan config in use.

The following directories were used for CGI scanning:

http://localhost/

While this is not, in and of itself, a bug, you should manually inspect these directories to ensure that they are in compliance with company security standards

Log Method

Details: CGI Scanning Consolidation

Version used: \$Revision: 4736 \$

Log (CVSS: 0.0)

NVT: SSL/TLS: Report Supported Cipher Suites

Summary

This routine reports all SSL/TLS cipher suites accepted by a service.

As the NVT 'SSL/TLS: Check Supported Cipher Suites' (OID: 1.3.6.1.4.1.25623.1.0.900234) might run into a timeout the actual reporting of all accepted cipher suites takes place in this NVT instead. The script preference 'Report timeout' allows you to configure if such an timeout is reported.

Vulnerability Detection Result

No 'Strong' cipher suites accepted by this service via the TLSv1.2 protocol.

'Medium' cipher suites accepted by this service via the TLSv1.2 protocol:

TLS_RSA_WITH_3DES_EDE_CBC_SHA

TLS_RSA_WITH_AES_128_CBC_SHA

TLS_RSA_WITH_AES_128_CBC_SHA256

TLS_RSA_WITH_AES_128_GCM_SHA256

TLS_RSA_WITH_AES_256_CBC_SHA

TLS_RSA_WITH_AES_256_CBC_SHA256

TLS_RSA_WITH_AES_256_GCM_SHA384

No 'Weak' cipher suites accepted by this service via the TLSv1.2 protocol.

No 'Null' cipher suites accepted by this service via the TLSv1.2 protocol.

No 'Anonymous' cipher suites accepted by this service via the TLSv1.2 protocol.

Log Method

Log (CVSS: 0.0)

NVT: robot(s).txt exists on the Web Server

Summary

Web Servers can use a file called /robot(s).txt to ask search engines to ignore certain files and directories. By nature this file can not be used to protect private files from public read access.

Vulnerability Detection Result

The file 'robots.txt' contains the following:

#

This file tells search engines not to index your CUPS server.

#

User-agent: *

Disallow: /

Solution**Solution type:** Mitigation

Review the content of the robots file and consider removing the files from the server or protect them in other ways in case you actually intended non-public availability.

Vulnerability Insight

Any serious web search engine will honor the /robot(s).txt file and not scan the files and directories listed there.

Any entries listed in this file are not even hidden anymore.

Log (CVSS: 0.0)

NVT: SSL/TLS: Report Supported Cipher Suites

Summary

This routine reports all SSL/TLS cipher suites accepted by a service.

As the NVT 'SSL/TLS: Check Supported Cipher Suites' (OID: 1.3.6.1.4.1.25623.1.0.900234) might run into a timeout the actual reporting of all accepted cipher suites takes place in this NVT instead. The script preference 'Report timeout' allows you to configure if such an timeout is reported.

Vulnerability Detection Result

No 'Strong' cipher suites accepted by this service via the TLSv1.0 protocol.

'Medium' cipher suites accepted by this service via the TLSv1.0 protocol:

TLS_RSA_WITH_AES_128_CBC_SHA

TLS_RSA_WITH_AES_256_CBC_SHA

No 'Weak' cipher suites accepted by this service via the TLSv1.0 protocol.

No 'Null' cipher suites accepted by this service via the TLSv1.0 protocol.

No 'Anonymous' cipher suites accepted by this service via the TLSv1.0 protocol.

No 'Strong' cipher suites accepted by this service via the TLSv1.1 protocol.

'Medium' cipher suites accepted by this service via the TLSv1.1 protocol:

TLS_RSA_WITH_AES_128_CBC_SHA

TLS_RSA_WITH_AES_256_CBC_SHA

No 'Weak' cipher suites accepted by this service via the TLSv1.1 protocol.

No 'Null' cipher suites accepted by this service via the TLSv1.1 protocol.

No 'Anonymous' cipher suites accepted by this service via the TLSv1.1 protocol.

No 'Strong' cipher suites accepted by this service via the TLSv1.2 protocol.

'Medium' cipher suites accepted by this service via the TLSv1.2 protocol:

TLS_RSA_WITH_AES_128_CBC_SHA

TLS_RSA_WITH_AES_128_CCM

TLS_RSA_WITH_AES_128_GCM_SHA256

TLS_RSA_WITH_AES_256_CBC_SHA

TLS_RSA_WITH_AES_256_CCM

TLS_RSA_WITH_AES_256_GCM_SHA384

No 'Weak' cipher suites accepted by this service via the TLSv1.2 protocol.

No 'Null' cipher suites accepted by this service via the TLSv1.2 protocol.

No 'Anonymous' cipher suites accepted by this service via the TLSv1.2 protocol.
